

LocalMind: Getting Started Guide

Before you start

LocalMind has three roles: Administrator, Faculty and Student. Each role has its own login and its own workspace.

1. Open **localmind.onesmarter.com** in a browser, or open the LocalMind app on your phone.
2. Pick your role on the login screen: Administrator, Faculty or Student.
3. Sign in with the username and first password your administrator gave you.
4. Change your password when asked. Every new account must do this once.
5. Read the three steps on your Overview page. They match the steps in this guide.

Administrator

You set up the people and the subjects. Do these in order, because faculty and students see nothing until you finish step 2.

1. **Add the people.** Go to **People**. Create faculty and student accounts one at a time, or upload many at once with **Excel user import**.
2. **Set up the subjects.** Go to **Subjects** and create each subject. Assign its faculty and enroll its students.
3. **Keep an eye on the platform.** Check **AI monitoring** for flagged AI answers, **System readiness** for server health, and **Audit log** for who did what.

Faculty

You turn a book into modules, lessons and quizzes for your students.

1. **Choose your subject.** Go to **Subjects**. Each subject holds its books, students and modules together.
2. **Prepare the content.** Go to **Books & modules** and upload a book (PDF, DOCX or TXT). Review the outline, then publish. Lessons are written in the background, so give them a few minutes.

3. **Send it to students.** Press **Synchronize all**. It sends whatever lessons and quizzes are ready now. Press it again later for content still being written.
4. **Make quizzes.** Go to **Quizzes**. Create an AI quiz from the modules you pick, or write one yourself. A quiz can't be published until its book is published.
5. **Check and release results.** Review student answers. Grading and releasing results are separate steps, so students see scores only when you release them.

Student

You study one module at a time and test yourself with quizzes.

1. **Choose your subject.** Go to **My subjects**. Open a subject, then a book, to see its modules.
2. **Learn one module at a time.** Read the module, open its lesson, and ask the AI tutor if you have a doubt.
3. **Check your understanding.** Go to **Quizzes** and take the quiz. Your score appears once your teacher releases results. Track everything in **My progress**.

Studying offline

1. While online, open **Course sync** so your course content is saved on your device.
2. Open **Offline AI** and download the AI model once (about 1.1 GB).
3. After that, you can read, take quizzes and ask doubts with no internet. Your work syncs when you reconnect.

Tip: **Private library** lets you add your own book. It stays on your device only.

Quick help

Problem	What to do
Forgot password	Ask your administrator to reset it.
Student sees no subjects	The administrator hasn't enrolled them yet.
Student sees no lessons	Faculty must publish the book and press Synchronize all .
Quiz score not showing	Faculty hasn't released results yet.

Problem	What to do
AI tutor not working offline	Download the model in Offline AI while online.
